ANTICOAGULATION MANAGEMENT CERTIFICATE PROGRAM FOR PHARMACISTS

Purpose:

Anticoagulation Management Certificate Program for Pharmacists is designed for pharmacists caring for adults with, or at risk of, thrombotic disorders in ambulatory care settings.

Target Audience:

The primary goals of this certificate program are to prepare pharmacists to 1) provide a high level of patient-centered care to adult patients with, or at risk of, thrombotic disorders; 2) create pharmacist advocates for appropriate care and treatment of persons receiving anticoagulant therapy in ambulatory settings; and 3) positively impact the way pharmacists perceive their role in the care and treatment of persons receiving anticoagulant therapy. Additionally, the nurturing of a growing cadre of advanced-trained pharmacists can have a dramatic impact on the care and treatment of all patients.

This certificate program provides 21 hours (2.1 CEUs) of continuing pharmaceutical education. This is comprised of a 15-hour (1.5 CEUs) home-study and a 6-hour (0.6 CEUs) on-site workshop.

Professional Competencies and Outcome Expectations:

This practice-based CPE activity addresses the following professional competencies (learning objectives):

- 1 Describe the pathophysiology, including predisposing factors, and presenting signs and symptoms of thrombotic disorders.
- 2 Design, recommend, monitor, and evaluate patient specific anticoagulant regimens that incorporate the principle of evidence-based medicine.
- 3 Identify appropriate goals and outcomes of pharmacologic treatments of selected thrombotic conditions, common adverse effects, common drug interactions, and impact of diet on patient outcomes.
- 4 Use effective oral and written communication skills to communicate with patients, caregivers, and other health care professionals regarding safe and optimal anticoagulation therapy.
